This sequence represents the human P-selectin glycoprotein ligand-1 (C (PSGL-1). P-selectin is a calcium-dependent carbohydrate binding protein CC expressed on the surfaces of activated platelets and endothelium in CC response to thrombin and other agonists. PSGL-1 is a high affinity CC P-selectin ligand produced by leukocytes. Binding of P-selectin to CC PSGL-1 is calcium ion dependent and is abolished by treatment of the C1 ligand with sialidase. PSGL is a homodimer, which a highly extended CC extracellular domain, which is a feature of mucin-like proteins. This sequence is targeted by the sulphated glycosylated peptides of the CC invention (see AAWS6175-W26188). PSGL-1 is also targeted by the CC invention (see AAWS6175-W26188). PSGL-1 is also targeted by the CC used for inhibiting the binding of P-selectin and other selectins to PSGL-1. They can be used for the treatment of inflammation, injury CC resulting from ischaemia and reperfusion, bacterial sepsis and CC disseminated intravascular coagulation, adult respiratory distress syndrome, tumour metastasis, rheumatoid arthritis, atherosclerosis and other autoimmune or inflammatory disorders. The products can also be used in the production of antibodies and in diagnostic annitations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17-MAY-1996;

```
CC having PSL activity which comprises a carbohydrate and a protein. The CC protein includes amino acids 42-60 of AAW72695, but lacks the CC protein includes amino acids 42-60 of AAW72695, but lacks the CR protein includes amino acids 42-60 of AAW72695, but lacks the CC protein includes amino acids 42-60 of AAW72695, but lacks the compression of mature CC protein may be useful in treating conditions characterized by P- or CC protein may be useful in treating conditions characterized by P- or CC protein mediated intercellular adhesion. Such conditions include mycocardial infarction, bacterial or viral infection, metastatic conditions, inflammatory disorders, asthma, emphysema, thermal injury, CC multiple sclerosis, diabetes, Reynaud's syndrome, neutrophilic CC dermatosis, Grave's disease, glomerulonephritis, gingivitis, Crohn's CC periodontitis, haemolytic uremic syndrome, ulcerative colitis, Crohn's CC disease, necrotising entercolitis, and cytokine-induced toxicity. The CC disease, necrotising entercolitis, such and cytokine-induced toxicity. The CC prepare organs for transplantation and to quell organ transplant to CC rejection. The isolated PSL may be used to treat haemodialysis and collection and to great the may also be used to treat haemodialysis and collection.
leukophoresis patients. Additionally, isolated PSL protein may be used an antimetastatic agent. The isolated PSL protein may be used itself as an inhibitor of P- or E-selectin-mediated intercellular adhesion or to design inhibitors of P- or E-selectin-mediated intercellular adhesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Soluble P-selectin ligand glycoprotein - sequence lacking intracellular domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     present sequence represents a human glycoprotein having P-selecting and (PSL) activity. The present invention describes a glycoprotein and a protein. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC glycosylation. This domain also contains three potential sites of tyrosine sulfation. Then protein also contains a subdomain of fifteen CC decameric repeats of a ten amino acid consensus sequence (AT/MEAQTTXP/LA/T, where X= P,A, Q, B or R). The protein binds in a CC calcium-dependent manner to P-selectin which is present on the surface CC of cells. The P-selectin ligand can be used to treat a wide variety of CC conditions characterised by intercellular adhesion involving P-, E- or CC L-selectins, e.g. myocardial infarction, infections, metastases, and to prevent transplant rejection. It CC can also be used to raise specific antibody (useful therapeutically as CC inhibitors of adhesion or for immunodiagnosis of inflammation and cancer) CC or to screen for selective inhibitors. Fusion proteins of the P-selectin CC ligand protein are used to treat conditions related to selectin CC endethelial cells to stimulate megakaryocyte progenitors, bone marrow complogenic protein (BMP) to stimulate bone or cartilage formation, CC or other cytokines to sites of inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC cells and platelets. The isolated by P-selectin ilgand proteins may be considered in treating conditions characterized by P-. E- or L-selectin comediated intercellular adhesion e.g. myocardial infarction, bacterial cc or viral infection, metastatic conditions, inflammatory disorders, ct thermal injury such as burns or frostbite, autoimmune thyroiditis, ct experimental allergic encephalomyelitis, multiple sclerosis, multiple cc organ injury syndrome secondary to trauma, diabetes, Reynaud's syndrome, cc Grave's disease, glomerulonephritis, gingivitis, periodontitis, cc Grave's disease, glomerulonephritis, gingivitis, periodontitis, cc matrophilic dermatosis (Sweet's syndrome), inflammatory bowel disease, cc Grave's disease, glomerulonephritis, gingivitis, periodontitis, cc manufacture enterocolitis, granulocyte transfusion associated syndrome, cc or cytokine-induced toxicity. Isolated P-selectin ligand proteins may calso be useful in organ transplantation, both to prepare organs for transplantation and to quell organ transplant rejection. P-selectin cligand proteins may be used to treat haemodialysis and leukophoresis cc patients or used as an antimecastatic agent. The fusion proteins can cc also be useful treat a condition which is affected by the protein to which the P-selectin ligand protein is fused. The fusion proteins can be used for the production of antibodies for use in therapy, detection, cd diagnosis and drug screening. The present sequence represents the human cc P-selectin ligand protein, as given in the present invention.

        A method has been developed for inhibiting P-selectin-mediated binding. The method comprises administering a soluble P-selectin ligand glycoprotein which lacks the transmembrane or intracellular domain of the mature glycoprotein and in which the protein portion comprises at least amino acids 42-60 i.e. Gln Ala Thr Glu Tyr Glu Tyr Leu Asp Tyr Asp Phe Leu Pro Glu Thr Glu Pro Pro, and the carbohydrate portion comprises sialyl Lewis X or sialyl Lewis A. Isolated P-selectin ligand protein may be useful in treating conditions characterised by P- or E-selectin mediated intercellular adhesion. Such conditions include myocardial infarction, bacterial or viral infection, metastatic

Isolated P-selectin ligand protein may be useful in organ transplantation, both to prepare organs for transplantation and to quell organ transplant rejection. Isolated P-selectin ligand protein may be used to treat haemodialysis and leukophoretic patients. The present sequence represents P-selectin ligand glycoprotein isolated from human promyelocytes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sulphated proteins, from proteinaceous and non-proteinaceous impurities, and DNA/histone complexes in the sample. The present sequence is of the human P-selectin glycoprotein ligand-1 (PSGL-1) protein used in the invention. The ten amino acid consensus repeat of the decameric subdomain of this protein is indicated in AAU09942.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         charged molecules, and purifying, under conditions such that the impurities are not bound to or washed off the substrate. The sample is then dissociated, while the target protein remains bound. The method is useful for isolating and purifying highly anionic target proteins e.g. sulphated proteins, from proteinaceous and non-proteinaceous impurities, purifying highly the protein of the protein 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Coffman JL,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified-site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides a method for purifying highly anionic target proteins from proteinaceous and non-proteinaceous impurities and DNA/histone complexes in the sample. The method of the invention involves contacting the sample with a substrate that reversibly binds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Purifying highly anionic target proteins from impurities and DNA/histone complexes in sample, by contacting sample to substrate that binds target, while impurities are washed off and the complexes are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-MAR-2000; 2000US-193351P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               27-MAR-2001; 2001WO-US09815

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   맑
                                                                                                                                                                                                                                                             The present invention relates to methods and compositions for modulating stenosis or restenosis in a subject having vascular injury or cardiovascular disease. The method comprises administering a P-selectin antagonist such as soluble P-selectin glycoprotein ligand-1 (PSGL-1) to the subject. The method is useful for preventing, inhibiting or treating stenosis or restenosis in a subject, preferably human, having vascular injury or coronary artery disease. Restenosis is characterised by
                        modulating leukocyte recruitment, inhibiting cell adhesion to blood sequence represents human PSGL-1.
                                                                             constrictive vascular remodelling or neointimal formation. The vascular injury or cardiovascular disease affects a coronary artery, or peripheral artery, preferably a carotid artery. The vascular injury results from angioplasty (percutaneous transluminal coronary angioplasty (PTCA)), or implantation of a stent or stents. The method is also useful for implantation glukocyte recruitment, inhibiting cell to cell adhesion, or including the coronary angioplasty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulating stenosis or restenosis in subject having vascular injury or cardiovascular disease, comprises administering P-selectin antagonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neointimal formation; coronary artery disease; peripheral artery; carotid artery; percutaneous transluminal coronary angioplasty; PTCA; stent implantation; leukocyte recruitment; cell to cell adhesion;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           thrombosis in a subject comprising administering a composition comprising an effective amount of a P-selectin antagonist. The polypeptides and polynucleotides of the invention have thrombolytic, and anticoagulant activity. The method is useful for treating or inhibiting thrombosis in subject, particularly a human. The method is also useful for inhibiting cell adhesion to blood vessels in a subject, increasing the movement of cells relative to blood vessels in a subject, or inhibiting the effect a thrombus-inducing agent in a subject. The subject is at risk for thrombosis, e.g. a subject suffering from a cardiovascular disease or disorder (e.g. atherosclerosis or hypertension), or a subject who has undergone cardiovascular or general vascular procedures or intervention

The ligand comprises residues 1-402, 1-310 (sol.), 42-402 (mature) or 42-310 (sol.) mature) of sequence AAR53965. An allelic variant (AAQ63954, AAR53966) was derived from human placenta. Co-transfection of a mammalian host cell with DNA encoding residues 42-310, plus DNA encoding collaba-1,3/alpha-1,4-fucosyltransferase and DNA encoding a soluble form of a paired basic amino acid converting enzyme (PACESOL), encoded by sequence AAQ63957, allowed production of sol. mature P-selectin ligand glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  吊
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
CC The present sequence represents a human glycoprotein having P-selectin CC ligand (PSL) activity. The present invention describes a glycoprotein CC having PSL activity which comprises a carbohydrate and a protein. The CC protein includes mino acids 42-60 of AAW72695, but lacks the CC protein includes mino acids 42-60 of AAW72695, but lacks the CC protein may be useful in treating conditions characterised by P- or CC pSL protein may be useful in treating conditions characterised by P- or CC pSL protein mediated intercellular adhesion. Such conditions include CC myocardial infarction, bacterial or viral infection, metastatic CC conditions, inflammatory disorders, asthma, emphysema, thermal injury, CC dermatosis, diabetes, Reynaud's syndrome, neutrophilic CC dermatosis, Grave's disease, glomerulonephritis, gingivitis, Crohn's CC disease, necrotising enterocolitis, and cytokine-induced toxicity. The isolated PSL protein may also be useful in organ transplantation, both to prepare organs for transplantation and to quell organ transplant CC rejection. The isolated PSL may be used to treat haemodialysis and C1 eukophoresis patients. Additionally, isolated PSL protein may be used as an inhibitor of P- or E-selectin-mediated intercellular adhesion or to design inhibitors of P- or E-selectin-mediated intercellular adhesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-APR-1995;

The p-selectin ligand is a glycoprotein. The protein binds in a calcium-dependent manner to P-selectin which is present on the surface of cells. The P-selectin ligand can be used to treat a wide variety of conditions characterised by intercellular adhesion involving P-, E- or L-selectins, e.g. myocardial infarction, infections, metastases, inflammation, Crohn's disease, and to prevent transplant rejection. It can also be used to raise specific antibody (useful therapeutically as inhibitors of adhesion or for immunodiagnosis of inflammation and cancer) or to screen for selective inhibitors. Fusion proteins of the P-selectin expression, e.g. fusion with interleukin-11 to treat bone marrow endothelial cells to stimulate megakaryocyte progenitors, bone morphogenic protein (BMP) to stimulate bone or cartilage formation,

Human

Human; P-selectin ligand; glycoprotein; fusion protein; infection; inflammation; intercellular adhesion; ulcerative colitis; asthma; diabetes; transplant rejection; myocardial infarction; thermal inj; metastatic condition; autoimmune thyroiditis; multiple sclerosis; Reynaud's syndrome; neutrophilic dermatosis; Sweet's syndrome; Grave's disease; glomerulonephritis; gingivitis; periodontitis; Crohn's disease; necrotising enterocolitis.

WO9943834-A2

```
CC comprising amino acids 42-60, 42-40, 42-310, 42-810 proteins or 42-189

CC of the P-selectin ligand protein. The fusion proteins comprising a

CC P-selectin ligand act as ligands for P-selectin on human endothelial

CC cells and platelets. The isolated P-selectin ligand proteins may be

CC useful in treating conditions characterized by P-, E- or L-selectin

CC mediated intercellular adhesion e.g. myocardial infarction, bacterial

CC or viral infection, metastatic conditions, inflammatory disorders,

CC thermal injury such as burns or frostbite, autoimmune thyroiditis,

CC experimental allergic encephalomyelitis, multiple sclerosis, multiple

CC organ injury syndrome secondary to trauma, diabetes, Reynaud's syndrome,

CC experimental ermatosis (Sweet's syndrome), inflammatory bowel disease,

CC organ injury syndrome, ulcerative colitis, periodontitis,

CC neutrophilic dermatosis (Sweet's syndrome), inflammatory bowel disease,

CC necrotising enterocolitis, granulocyte transfusion associated syndrome,

CC necrotising enterocolitis, granulocyte transfusion associated syndrome,

CC or cytokine-induced toxicity. Isolated P-selectin ligand proteins may

CC also be useful in organ transplantation, both to prepare organs for

CC transplantation and to quell organ transplant rejection. P-selectin

CC patients or used as an antimetastatic agent. The fusion proteins can

CC which the P-selectin ligand protein is fused. The fusion proteins can

CC used for the production of antibodies for use in therapy detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             used for the production of antibodies for use in therapy, detection, diagnosis and drug screening. The present sequence represents the human P-selectin ligand protein, as given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 110-111; 145pp; English.
